  <title>Learning Basic HTML Tags – Beginner Web Blog</title>
</head>

<body>

<h1>Welcome to My HTML Learning Blog</h1>

<p>HTML (HyperText Markup Language) is the foundation of every website on
the internet. In this blog, I will demonstrate some basic HTML tags and
explain their purpose with real examples. These tags are essential for
creating and structuring any webpage.</p>

<h2>1. Title Tag</h2>
<p>The <b>title tag</b> is used to give a name to the webpage. This name
appears on the browser tab and helps users and search engines understand
what the page is about.</p>

<pre>
<title>Learning Basic HTML Tags – Beginner Web Blog</title>
</pre>

<p><i>In this blog, the page title you saw at the top of the browser is
created using the title tag.</i></p>

<h2>2. Anchor Tag (Links)</h2>
<p>The <b>anchor tag</b> is used to create clickable links that take users
to another webpage.</p>
```

```
<pre>
<code><a href="https://www.wikipedia.org" target="_blank" title="Visit
Wikipedia">Click here to visit Wikipedia</a>
</code>
</pre>
```

<p>Example Output:</p>

```
<a href="https://www.wikipedia.org" target="_blank" title="Visit
Wikipedia">Click here to visit Wikipedia</a>
```

<h2>3. Heading Tags</h2>

<p>Heading tags define the headings and subheadings of a webpage. They range from H1 (biggest) to H6 (smallest).</p>

```
<pre>
<code><h1>Main Heading</h1>
<h2>Sub Heading</h2>
<h3>Section Title</h3>
</code>
</pre>
```

<p>In this blog, the large title at the top and section headings are created using these tags.</p>

<h2>4. Paragraph Tag</h2>

<p>The paragraph tag is used to write text content in sentence form.</p>

```
<pre>
<code><p>This is a sample paragraph written using the paragraph
tag.</p>
</code>
</pre>
```

`<p>`The explanation text you are reading now is written using paragraph tags.`</p>`

`<h2>`5. List Tags`</h2>`

`<p>`HTML provides list tags to organize content. There are two main types:`</p>`

```
<ul>
  <li><b>Ordered List (numbered)</b></li>
  <li><b>Unordered List (bulleted)</b></li>
</ul>
```

`<p>`Example:`</p>`

`<p><b>`Ordered List:`</b></p>`

```
<pre>
&lt;ol&gt;
  &lt;li&gt;HTML&lt;/li&gt;
  &lt;li&gt;CSS&lt;/li&gt;
  &lt;li&gt;JavaScript&lt;/li&gt;
&lt;/ol&gt;
</pre>
```

`<p><b>`Unordered List:`</b></p>`

```
<pre>
&lt;ul&gt;
  &lt;li&gt;Web Design&lt;/li&gt;
  &lt;li&gt;Web Development&lt;/li&gt;
  &lt;li&gt;UI/UX&lt;/li&gt;
&lt;/ul&gt;
</pre>
```

<p>Output:</p>

HTML

CSS

JavaScript

Web Design

Web Development

UI/UX

<h2>Conclusion</h2>

<p>In this blog, we learned the basic building blocks of HTML including title, anchor, heading, paragraph, and list tags. These tags form the starting point for learning web development. With these basics, you can now begin creating your own web pages and explore more advanced HTML and styling with CSS.</p>

<p>Thank you for reading! Keep learning and happy coding!</p>

</html>

Welcome to My HTML Learning Blog

HTML (HyperText Markup Language) is the foundation of every website on the internet. In this blog, I will demonstrate some basic HTML tags and explain their purpose with real examples. These tags are essential for creating and structuring any webpage.

1. Title Tag

The **title tag** is used to give a name to the webpage. This name appears on the browser tab and helps users and search engines understand what the page is about.

```
<title>Learning Basic HTML Tags – Beginner Web Blog</title>
```

In this blog, the page title you saw at the top of the browser is created using the title tag.

2. Anchor Tag (Links)

The **anchor tag** is used to create clickable links that take users to another webpage.

```
<a href="https://www.wikipedia.org" target="_blank" title="Visit Wikipedia">Click here to visit Wikipedia</a>
```

Example Output:

[Click here to visit Wikipedia](https://www.wikipedia.org)

3. Heading Tags

Heading tags define the headings and subheadings of a webpage. They range from **H1 (biggest)** to **H6 (smallest)**.

```
<h1>Main Heading</h1>
<h2>Sub Heading</h2>
<h3>Section Title</h3>
```

In this blog, the large title at the top and section headings are created using these tags.

4. Paragraph Tag

The **paragraph tag** is used to write text content in sentence form.

```
<p>This is a sample paragraph written using the paragraph tag.</p>
```

The explanation text you are reading now is written using paragraph tags.

5. List Tags

HTML provides list tags to organize content. There are two main types:

- **Ordered List (numbered)**
- **Unordered List (bulleted)**

Example:

Ordered List:

```
<ol>
  <li>HTML</li>
  <li>CSS</li>
  <li>JavaScript</li>
</ol>
```

Unordered List:

```
<ul>
  <li>Web Design</li>
  <li>Web Development</li>
  <li>UI/UX</li>
</ul>
```

Output:

1. HTML
2. CSS
3. JavaScript

- Web Design
- Web Development
- UI/UX

Conclusion

In this blog, we learned the basic building blocks of HTML including title, anchor, heading, paragraph, and list tags. These tags form the starting point for learning web development. With these basics, you can now begin creating your own web pages and explore more advanced HTML and styling with CSS.

Thank you for reading! Keep learning and happy coding!
